

LINE RESCUE CHALLENGE 2009

COMMAND

ASSESSOR :					TEAM :													
SCENARIO:					COMMENTS					DATE:								
INITIAL CREW APPROACH					B	E	T	S						TIME:				
RISK ASSESS HAZARDS IDENTIFIED														POSITIVE POINTS				
FULL INNER AND OUTER SURVEY & INFO GATHERED																		
INITIAL PRIORITIES GIVEN TO TEAM																		
APPRECIATION OF CASUALTY LOCATION																		
PLANNING & COMMUNICATION					B	E	T	S										
LOGICAL PLAN BRIEFED/FLEXIBLE A & B																		
LIAISES CONSULTS & LISTENS																		
INSTRUCTIONS ACTED ON & UNDERSTOOD																		
CASUALTY AWARENESS AT ALL TIMES																		
COMMAND & CONTROL					B	E	T	S										
TEAM LEADER INFLUENCE EVIDENT																		
GOOD OVERALL POSITIONING																		
SIMULTANEOUS ACTS & CO-ORD TEAM																		
CLEAR HANDOVER TO HEAD																		
SAFETY					B	E	T	S										
USE OF PPE																		
MAINTAINS A SAFE WORKING AREA																		
CONTROLS MANUAL HANDLING																		
CONTROLS ALL ASPECTS OF SAFETY & WELFARE																		
SUPPORT					B	E	T	S										
RESOURCES AVAILABLE WITH NO DELAY																		
MAINTAINS TEMPO & MOTIVATES TEAM																		
MINIMUM HANDS ON																		
MIN. ON SCENE COACHING/TEACHING																		
DEBRIEF SUMMARY										SCORE CHECKER'S INITIALS								
										MAX 200								
										TOTAL SCORE								
ASSESSORS SIGNATURE :																		

SCORE		INITIAL CREW APPROACH	PLANNING & COMMUNICATION	INCIDENT COMMAND	SAFETY	SUPPORT
BASIC	1 - 4	Safety critical Hazards missed,	No clear plan developed, IC becomes too focused on a single plan and no emergency route given.	IC allows team members to take control and is not strong in the controlling of the scenario	IC has little or no concern for the use of safe systems/devices and PPE by team when in hazard areas	Resources, equipment and procedures delayed due to lack of pre planning.
		No effort to check the scene,	IC overbearing towards team and ignores consultation, fails to listen and liaise with team	IC not well positioned to manage team activities	Manual handling managed poorly, in relation to lifting and moving operations	IC does not encourage team and tempo of crew is slow throughout the scenario
		Initial Identification of initial priorities not recognised and acted upon	Instructions are ignored or not understood by team	IC does not ensure actions are completed logically and efficiently Operational activity does not contribute to achieving rescue plan efficiently	Critical safety hazards/aspects are missed during the scenario which impacts on both the casualty and teams safety eg buddy checks	IC becomes very task focused and loses command overview for the majority of the scenario
		Casualty access not immediately located	IC fails to consider impact on casualty and does not ensure team is always advising casualty and medic before actions are taken.	Casualty access inappropriate to safely rescue casualty.	IC allows the tempo of the rescue to sacrifice safety for speed	IC provides coaching on techniques constantly during the scenario
EFFICIENT	5 - 7	All hazards identified but not effectively dealt with	Plan 'A' is developed and a plan 'B' is outlined IC modifies plan after encountering some difficulty but is slow to recognise problems. Plan is re-assessed only in anticipation of problems	IC's skills are clearly recognisable by their actions, but some instances occur where they lose command of the scenario	IC is aware of team safety and only at times ensures use of appropriate safe systems/devices and PPE by team when in hazard areas	Operations co-ordinated at times in order to achieve objective. Resources, equipment and procedures utilised effectively with little delays
		Management of scene is somewhat "mechanical" with poor information exchange mechanism	IC has limited discussion with team or consults excessively	Good position taken initially but not maintained throughout the scenario	All safety hazards/aspects are taken into account but not all dealt with efficiently	IC provides some encouragement and motivation, but a good tempo is not maintained throughout scenario
		Initial priorities identified but not all acted upon	IC gives clear instructions to team but does not confirm teams understanding	Choice of techniques is consistent with achievement. Planned deployment of equipment and resources evident. Direction of team activities is logical	Some attention is paid to manual handling but not consistently throughout evolution	IC becomes a little task focused from time to time.
		Casualty access identified but late on in scenario	Communications not consistent throughout evolution resulting in some activities being carried out without awareness of casualty	IC identifies the need to hand over command during casualty handling activities but does not receive the hand over back	IC does not manage the tempo of the rescue consistently	IC provides coaching on techniques intermediately during the scenario
THOROUGH	8 - 10	All hazards identified and dealt with efficiently throughout the scenario	Good and viable options considered with a demonstration that plan 'B' is available and viable. Clear planning predicts potential problems before they occur modifies plan effectively and efficiently if necessary, with no loss of momentum and constantly re-assessed.	Excellent Incident Command skills demonstrated at all times with total control throughout scenario	IC effectively controls safety and ensures all team make full use of safe systems/devices and PPE by team when in hazard areas at all times	All decisions made in a timely and efficient manner to ensure maximum efficiency of resources, equipment and procedures
		Well organised and thorough scene survey	IC consults with team and considers suggestions,	Maintains good overall positioning to effectively monitor and manage teams performance	Scene thoroughly assessed and regularly re-assessed Clear focus on creating a safe work environment All hazards clearly identified and managed efficiently	IC effectively motivates and encourages team and a good tempo is maintained throughout the scenario
		Initial priorities identified and acted upon efficiently	IC has an effective style of communication & ensures all instructions are clearly understood	All actions contribute to achieving the objective as effectively and efficiently as possible with simultaneous activity demonstrated	Manual handling is well managed with team approach to the lifting and movement operations	IC assists where and when appropriate but does not become task focused
		Casualty's predicament and difficulty of rescue is thoroughly assessed and a plan immediately developed	IC's concern for the safety and welfare of the casualty is clearly evident by the instructions given	Clear handover of control during casualty movement. Clearly returned to the IC after this action is concluded	IC ensure team continually monitor each other for compliance with safe work practices, and controls the tempo of the rescue safely	IC does not coach or teach at any time during evolution
